BMO European Equity Fund ID Acc EUR

(ISIN LU1438422237), a Fund of BMO Investments (Lux) I Fund.
The independent Management Company for the Fund is FundRock Management Company S.A.

Objectives and investment policy

The objective is to achieve a long term increase in the value of your investment.

The Fund seeks to achieve this by investing at least 75% of its total assets in equities (ordinary shares in companies) and equity related securities such as warrants (the right to purchase a security, usually an equity, at a specific price within a certain time frame) of European companies. Equity exposure is normally well above the minimum stated level.

The effect that changes in interest rates and currency exchange rates may have on your investment can be reduced through the purchase of Options (the right but not the obligation to buy a particular investment), or financial futures contracts (the purchase of an asset at a predefined price and a predetermined future date) or currency forward contracts (the purchase or sale of a specific amount of currency at a predetermined price on a predetermined future date). This is commonly known as a 'Hedge'. The Hedge reduces the effect of both positive and negative changes in interest and exchange rates.

The Fund may also hold liquid assets (cash and government bonds) on a short term basis up to 15% of the value of the Fund.

Income generated by the Fund may be paid to you or, at your request, reinvested to increase the value of your investment.

There is no minimum holding period for this Fund. However, it may not be appropriate for investors who plan to withdraw their money in under 5 years.

You may withdraw your investment on demand during any working day in Luxembourg. Your withdrawal instruction must be received before 12.00 central European time in order for your investment to be withdrawn the same day. Proceeds will normally be paid to you three business days later.

Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

Historical data may not be a reliable indicator of the Fund's future risk profile thus the risk category shown is not guaranteed and may change over time. The lowest category does not mean 'risk free'.

The given rank reflects the effect of the Fund investing mainly in equities. Equities generally provide higher rewards and higher risk.

The indicator does not take into account the following risks:

Counterparty Risk: to gain greater income the Fund may deposit cash with various approved Counterparties. Return of the cash is dependent upon the continued solvency of the Counterparty.

Currency Risk: your investment may be adversely affected by changes in currency exchange rates.

Market Risk: the value of assets held by the Fund may go down as well as up. There can be no assurances that the investment objectives of the Fund will be achieved.

Warrant Risk: small movements in the price of the asset to which the warrant relates may result in a disproportionately large movement, up or down, in the price of the warrant.
